

## Waste Management Policy

BMRCL waste management includes the collection, transport, processing, recycling and disposal of waste materials. With an emphasis on prevention, reuse and recycling, we aim to reduce the amount of waste we generate.

BMRCL shall strive to:

- ❖ Regulate waste generation at all sites and ensure proper disposal, reuse excavated material on site and on other projects. All clean soil excavated during the project to be put to use beneficially. We shall not degrade the soil fertility at construction sites
- ❖ Implement effective approaches to waste management across our business and create awareness amongst BMRCL employees and its stakeholders.
- ❖ Dispose the waste generated from our operations as per Government regulatory requirements covering all legal requirements.
- ❖ Implement various initiatives for reuse and recycling and for using recycled products.
- ❖ Work to ensure appropriate processing of various types of waste paper / packing wood generated at offices, establishments, stations, trains, depots and other locations.
- ❖ Seek to purchase reusable and recycled material wherever possible and avoid uses of non-biodegradable materials.
- ❖ Recycling of tree branches, leaves and waste food to manure and enrich soil fertility.
- ❖ Spread awareness on appropriate waste management among public to improve environment.

BMRCL is committed to the efficient management of material and waste and ensure sustainable use of these resources through green certification.
